

You Shouldn't Have to Sell What You Own Just Because You Need Liquidity

A Bitcoin holder needs money for rent. An emergency strikes. A business opportunity appears. The choice feels impossible: sell the asset you believe in — or go without.

Meanwhile, someone else has capital. They want to lend. But lending requires trust — in the borrower, the agreement, the collateral, the repayment.

Persat Finance exists to make credit possible without relying entirely on trust.

One Problem. Two Sides.

The Borrower

- I have valuable assets. I need liquidity. I don't want to sell them.
- Selling sacrifices future upside and ownership
- Existing lending options require custody or intermediaries
- Access to suitable credit is fragmented

The Lender

- I have capital. I want to lend. But I don't want to depend on trust.
- How do I find credible borrowers?
- How do I know the collateral exists?
- What happens if they don't repay?
- How do I enforce the agreement?

□ The world doesn't lack capital or assets. It lacks infrastructure that allows the two sides to meet safely.

Persat Finance: The Marketplace and Trust Layer

A peer-to-peer credit marketplace and trust layer for onchain lending and borrowing.

For Borrowers

Find lenders and unlock liquidity against eligible digital assets.
Keep ownership. Access capital.

For Lenders

Discover borrowers with eligible digital-asset collateral. Lend without relying solely on personal trust.

Persat Provides

Discovery • Negotiation • Collateral Management • Escrow • Digital Loan Agreements • Settlement • Repayment Tracking • Liquidation Execution

We don't eliminate the relationship between borrower and lender. We give that relationship infrastructure.

How Persat Works

Every step is structured so neither side must rely entirely on the other's goodwill — collateral, escrow, and smart-contract settlement enforce the agreement at every stage.

Bitcoin is Our Wedge. Credit is Our Destination.

We are piloting with Bitcoin because it is globally recognized, highly liquid, and represents a strong initial use case for secured P2P credit infrastructure.

But Bitcoin is only the beginning.

Our Expansion Path

We are not building a Bitcoin lending company. We are using Bitcoin to prove an asset-agnostic credit infrastructure model.

1

Bitcoin

Pilot asset

2

Digital Assets

Expand collateral

3

Multi-Asset

Broaden access

4

Asset-Agnostic

Credit infrastructure

From Idea to Beta: We've Already Started

Validation Milestones

1 Research

Conducted extensive market and technical research to confirm the problem and opportunity.

2 Validation

Validated the underlying idea with target users — borrowers and lenders confirmed the need.

3 Prototype

Developed a working prototype and refined the product model based on user feedback.

4 Beta

Begun onboarding beta testers.
Accepted into the **iHatch incubation program**.

□ This is early-stage traction. We are moving from validated idea to working infrastructure: Research → Validation → Prototype → Beta → Testnet → Audited Mainnet

A Huge Amount of Digital Capital Exists. Much Remains Economically Underutilized.

Research estimates only — not independently verified facts.

What This Means

Trillions in digital assets sit idle — not because owners don't want returns, but because **safe, structured credit infrastructure doesn't exist** to mobilize them.

Broader potential opportunity: ~\$1.6T

Our Strategy

- **Initial wedge:** Bitcoin-backed P2P credit
- **Larger opportunity:** Multi-asset secured credit
- **Ultimate destination:** Asset-agnostic onchain credit infrastructure

❏ Persat does not need to capture the entire market. We need to own the infrastructure layer.

We're Not Just Building Another Lending Protocol

Traditional Private Lending

Trust the *person*. Relationships determine access. No enforcement layer.

DeFi Lending Pools

Trust the *protocol* and liquidity mechanism. Algorithmic, impersonal, no negotiation.

Persat

Discover the counterparty + structure the relationship + secure the transaction. Marketplace + negotiation + trust layer — all in one.

Persat occupies a **distinct white space** at the intersection of P2P credit discovery and onchain secured lending — between traditional private lending, centralized crypto lending, DeFi protocols, and P2P platforms.

What Starts with Bitcoin Can Become a New Layer for Global Credit

1

Today

Bitcoin-backed P2P lending — proven collateral, real liquidity needs, infrastructure being built.

2

Tomorrow

Multi-asset secured lending — expand eligible collateral, deepen the marketplace.

3

Long Term

Asset-agnostic credit infrastructure — any asset, any willing counterparty, anywhere.

Any willing borrower with eligible assets should be able to discover capital.
Any willing lender should be able to discover secured credit opportunities.
Persat becomes the infrastructure connecting the two.

One marketplace. One trust layer. Many assets. Global credit.

Why Us: The Genesis of Persat

Persat Finance isn't just a business idea; it was born from a firsthand encounter with a critical problem in the digital asset space.

David's Journey: Identifying the Gap

As a long-time crypto user, our founder David experienced the problem directly. He sought to unlock liquidity against his Bitcoin, only to find the options uncomfortable: he had to place his assets with a centralized lender, giving up control.

The **Celsius collapse** in June 2022, which left hundreds of thousands locked out of \$4.7B in crypto, underscored a glaring deficiency in the market:

Why should accessing liquidity require giving up control of the asset — or placing complete trust in the intermediary?

David dedicated over two years to researching and refining an answer. After exploring various models, he arrived at Persat's current vision: a peer-to-peer credit marketplace and trust layer.

Prince Joins: Vision & Execution

Prince joined the mission, recognizing the immense potential beyond the initial idea. Their shared obsession with unlocking digital capital's potential made the partnership natural and powerful:

- **David** brought the problem conviction and deep domain insight.
- **Prince** contributed technical execution and product vision.

Together, they refined the concept into the robust framework of Persat Finance.

The Founder

Experienced the problem firsthand.

The CTO

Saw the immense possibility.

- This isn't just a business plan; it's a solution to a problem we intimately understand, built by those who lived it.

The Team

David Obiokafor
Founder & CEO

- Medical student at Enugu State University of Science and Technology (ESUT)
- Long-term user of cryptocurrency and blockchain
- Identified the problem firsthand through his experience with crypto-backed lending
- Has spent 2+ years researching and refining the concept behind Persat Finance
- Led multiple iterations of the model before arriving at the current P2P marketplace + trust-layer approach

Prince Nzubechukwu Michael
Co-founder & CTO

- Technology and product builder with background in Robotics & Artificial Intelligence
- Developed Unmute, an AI sign-language translation system, during his work with Robotics and Artificial Intelligence Nigeria (RAIN)
- Joined Persat to turn the underlying vision into a technically executable product
- Focused on product development, architecture and technology

Domain conviction + technical execution.

Get In Before Credit Gets Rebuilt

We Are Raising

\$75K

SAFE for 5% equity

The Milestone

Prototype → Audited Testnet → Beta → **Mainnet**

Bitcoin is our first asset. Asset-agnostic credit is the destination.

How This Unlocks Our Roadmap

Allocation	Amount	Purpose
Protocol Development	\$20K	Core lending, collateral, escrow & settlement infrastructure
Security & Audit	\$20K	Independent smart-contract & protocol security audits before mainnet
Testnet & Infrastructure	\$10K	Deploy, operate and stress-test in controlled environment
Beta & Early Users	\$10K	Onboard borrowers & lenders, run marketplace experiments
Legal & Regulatory	\$7.5K	Stablecoins, digital-asset lending, target markets
Operations & Contingency	\$7.5K	Operational runway and contingency reserve

Persat Finance | **Negotiate. Lend. Earn.**

The credit marketplace and trust layer for onchain lending and borrowing
